                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-105-537-5
; Sequence 5, Application US/09105537A
; Patent No. 6265202
; GENERAL INFORMATION:
; APPLICANT: Sherman, D.H.
; APPLICANT: Xue, Y.
; APPLICANT: Zhao, L.
; TITLE OF INVENTION: DNA encoding methymycin and pikromycin
; FILE REFERENCE: 600.4338US1
; CURRENT APPLICATION: US/09/105,537A
; CURRENT FILING DATE: 1998-06-26
; NUMBER OF SEQ ID NOS: 43 polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

                                                                                                                                                                                                                                                 ö
                                               The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polymucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Bolymucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polymucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Onlynucleorides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CGCCAGCAAGCTGGGCCCGCTCATCGACGGCTCCGGCCTCTTCTACAAGCCGCTCCAGGC 161

```

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid blosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with saltered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA or of ATTCGCGTCTCCGGCGTCCGAGTCGTCGCCCGAGGGCGCCGTGTGGCGGAGCG CGCCAGCAAGCCGGGCCCGCTCATCGACGGCTCCGGCCTCTTCTACAAGCCGGTCCAGGC TCCCCATACCATGTCCGACCTCCACCCGGGGGCACCAAGTCGCCGGCCACCGCGCCTC CGCCAGCAAGCTGGGCCCGCTCATCGACGGCTCCGGCCTCTTCTACAAGCCGCTCCAGGC CGGCGACCGTGGGGACCACGAGGTCGCCTTCTATGAGGCGTTCTCCGCCCACGCCGCT CCCGGCCCGCATCCGAGACACCTTCTTCCCCCGGTTCCACGGCACGCGACTCCTCCCCAC CCGGGCCGCATCCGAGACACCTTCTTCCCCCGGTTCCACGGCACGCGGACTCCTCCCCAC CGAGGCGCAGCCCGCATCCTCACCTCGTCCTCGACGACCTCCTCGCGGGGTT TCAGGCGCCCTGCGCAGCCATCAAGATCGGCGCCCATCACGTGGCCACCGAGTTCGCC Gaps New inositol polyphosphate kinase polynucleotides and polypeptides, useful in modulating phytic acid biosynthesis by decreasing phytate increasing non-phytate phosphorous to improve the nutritional value animal feed. 1; 923; Sequence 923 BP; 138 A; 326 C; 286 G; 173 T; 0 U; 0 Other; Length Indels RE; 62.3%; Score 837.4; DB 6; llarity 97.5%; Pred. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with a altered phenotype. IPPK proteins are used to screen compounds that modulate thair activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA rccaccecceascaccasarceccesrcacececcicceccaecascasecres CTTCTGGGCTATGATGCTGCTGCAGTCGCAGGCGGAGATGGGGGTGGGGTGACGGTG caccarceccaccecercaccecrrecreearag-----receearaccarecearec TCCACCCGCGGAGCACCAAGTCGCCGGCCACCGCGCCTCCGCCAGCAAGCTGGGCCCGC TCATCGACGGCTCCTCTTCTACAAGCCGCTCCAGGCCGGCGACCGTGGGGAGCACG rcarcaacacreredecrerretacaadececrecadecedeceacearedadeacace AGGICGCCTICTATGAGGCGTICTCCGCCCACGCCGCCGTCCCGGCCCGCATCCGAGACA AGGTCGCCTTCTATGAGGCGTTCTCCGCCCACGCCGCCGTCCCGGCCCGCATCCGAGACA CCTTCTTCCCCCGGTTCCACGGCACGCGACTCCTCCCCACCGAGGCGCAGCCCGGGGAGC CGCATCCTCACCTCGTCCTCGACGACCTCCTCGCGGGGTTTCAGGCGCCCTGCGTCGCAG ACATCAAGATCGGCGCCATCACGTGGCCACCGAGTTCGCCGGAGCCCTACATCGCCAAGT ACATCAAGATCGGTGCCATCACGT-----GAGTCGTCGGCCCCGAGGGCGCCGTGTGGCGGACGCGCCCCGGAGGTGAAGGCCATGG GAGTCGTCGGCCCCGAGGGCGCCGTGTGGCGGACGGAGCCCCCGGAGGTGAAGGCTATGG ACACCGCCGCCGCCGCGTGCTCCGCCTACGTGTCATCCG-TTGCCGACGAGGGG ACATTGTCGGCGTCCGCGTGCTCCGGCGCTACGTGTCATCCGCTTGCCGACGAGGGG ATGGACTGTGCGCTGCGCGCTGTACGGAAAAGGTGGAGTCTTGTCACAGCTG Argeactececerceceececestarceaceasaaaserceactercreacte CGCGAGCTCAAGGCGTTCGAGGAGCAGACTCTGTTCCACTTCTACTCGGCGTCGATT ceceaecrcaaeecereerreaeeecaeacrercrerrecaerreaereearr AAGCTGGTGGACTTTGCCCATGTGGCCGAGGGTGATGGGGGTGATTGACCACAACTTCCTG AAGCTGGTGGACTTTGCCCCATGTGGCCGAGGGTGATGGGGTGATTGACCACAACTTCCTG CACGAGGTCAGCCGTCGCGCCCATAGTCCCCTTCCCCATACCATGTCCGACC GCCTCGCCAAGGACCGCGGACCACGATTCTGCTCGGATTCCGCGTCTCCGGCGTCC Gaps 63; Length 3416; 837 T; 0 U; 0 Other; IndelB Score 740.4; DB 6; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynuclectides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Orlynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                 The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid blosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       526
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     166

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and rahising anti-idiotypic antibodies. The present sequence is maize IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      926
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of o

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulabating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and ralising anti-idiotypic antibodies. The present sequence is Eucalyptus grandis IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               116 GCCCGCTCATCGACGGCTCTGCTACAAGCCGCTCCAGGCCGGCGGCGTGGGG 175

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   786

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is soybean IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GCCAAGTGCCTCGCCAAGGACCGCGGGACCACGAGGTTCTGCTCGGATTCCGCGTCTCC 474

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polymucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing physate and/or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that
